IDENTIFIERS *Oklahoma

ABSTRACT

The 1983-1984 Student Data Report, which is derived from the Oklahoma Regents' Unitized Data System, is presented. Statistical data and narrative sections cover movement into college, enrollments, student distribution, student progression, and transfer of students. Specific topics include: average annual movement of Oklahoma students into higher education from high school; high school senior and first-time freshmen enrollments by county:; first-time freshmen enrollments; headcount enrollment; headcount enrollment by class level; enrollment by division; student semester hours by division; enrollment by race, sex, class level, and full-time/part-time status; unduplicated headcount student enrollments for public institutions by race and sex; percentage of student enrollment by race within the institution; percentage of student enrollment by race within the state system; public and private enrollments by program of study and class level; public enrollments by county; public institution enrollment by age, sex, race, and class level; public undergraduate student progression; and projected undergraduate student flow based on a cohort of first-time entering freshmen; and transfer pattern of students. PREFACE

The Student Data Report for 1983-84 is the second annual publication of comprehensive student data derived from the State Regents' Unitized Data System. The Unitized Data System (UDS) has been in place since 1977. Over time it has developed into a highly functional and accurate policy and planning tool. Each semester a minimum of seventy-five discrete data elements are gathered on every student in the State System of Higher Education. It is from these "units" of data that the UDS constructs a myriad of state and federal reports and studies.

This Annual Report utilizes the UDS to produce many of the primary measures of student involvement in higher education: movement into college, enrollments, student distribution, student transfer and progression, semester-credit-hours, and the like. The series of tables and figures is intended to be factual rather than interpretive. They are intended for use by public officials, institutional administrators, and Boards of Regents in the development of higher education plans and programs.

In one major respect this report differs from previous reports of similar nature. The tables and figures contained herein are, for the most part, summaries of existing and often vastly comprehensive and detailed data reports. Table 6 for example is a one-page summary of a 2,000 plus page enrollment report by institution, program, race, sex, class level, and full-time/part-time status. Figure 5 is a pictographic summary of a 155-page report on annual undergraduate student progression within each institution and the system by race, sex, and class level. Thus the Student Data Report for 1983-84 is not only a self-contained document but may serve as an index to sources of comprehensive data that could be useful to State System administrators.

In that the Unitized Data System is in a mode of continuous edit, reports generated at different times will be depicting slightly different populations even within the same time parameters. If cross comparisons between tables are made, it is recommended that the user check the grand totals as well as table headings and footnotes to ascertain the degree of variance between the two measured populations before making specific comparisons. As a general rule, the later the production date the more accurate the units of data used to generate the report.

STUDENT INFLOW

PART I

STUDENT INFLOW

Figure 1: Average Annual Movement

This figure examines the flow of Oklahoma students into higher education from high school. High school seniors are used as a comparative demographic base because the open-admission of some institutions and five-percent admissions waiver policies of others do not necessarily require a high school diploma. An annual average based on a five-year history is used in order to mitigate the effects of any one anomalous year. The equivalent flow from high school to college the next summer and fall equals 67 percent of the senior class over time. Equivalent flow is the statistic traditionally cited as the "college-going rate."

Linear flow describes the movement of 17-19 year olds who are high-school graduates and who move directly from high school into college. The linear flow is 36 percent on an annual average, or approximately half the level of equivalent flow.

Analysis.—In the simplest of analysis, over time, two out of three Oklahoma high school seniors may go on to college in the public sector. One of the two will go directly to college from high school, and the other will delay entry one or more years. When the private colleges and the spring terms are calculated into the flow, the rate increases as reported under Table 1.

Figure 2: High School Senior Enrollment by County

This figure displays the annual average high school senior enrollments by county for the five years 1978-79 to 1982-83 in Oklahoma high schools. These enrollments are used as the demographic base from which the flow of first-time freshmen into college is measured.

Figure 3: First-Time Freshmen Enrollments by County

This figure distributes the annual average enrollments of first-time freshmen by county. This figure used in conjunction with Figure 2 will allow for the calculation of equivalent annual average flow into college for a county.

Analysis.—For example, Oklahoma County had an annual average of 7,165 high school seniors and 6,217 first-time freshmen reported as originating from Oklahoma County. The equivalent student flow from Oklahoma County would be 86.8 percent or some 19.9 percentage points larger than 66.9 percent reported in Figure 1 as the state rate.

Table 1: First-Time Freshmen Enrollments 1983-84

Table 1 contains the gross count of first-time-entering undergraduate students for 1983-84. It includes students from outside Oklahoma as well as in-state and unclassified as well as classified students.

Analysis.—Over the three terms of 1983-84, the public and private schools as an aggregate enrolled 44,790 first-time entering students. Interestingly, this equals 107 percent of the annual average number of high school seniors reported in Figure 1. In the aggregate the state serves more first-time entering students than we have high school seniors. Many of these are "backlogged" older Oklahoma students but many more are educational "load" transferred to the state by the federal government and other states. These figures also represent an annual decline of 4 percent for the fall, down from 35,554 in 1982-83 and 21 percent for the spring, down from 13,652 in 1982-83.

ENROLLMENTS

PART II

ENROLLMENTS

Table 2: Head-Count Enrollment

This table presents the number of head-count students enrolled in Oklahoma higher education by institution in the summer of 1983, the fall of 1983, and the spring of 1984. In order to be included in this table, a student must be enrolled, be attending class, and have paid his or her fees as of the census date. (The census date is one week after the beginning of classes in summer, and two weeks after the beginning of classes in the fall and spring semesters.)

Analysis.—In the 1983 fall semester, 172,969 students were enrolled on the campuses of those 27 public and 14 private colleges which reported data to the State Regents for that semester. The fall is considered to be the definitive semester for most purposes, because the greatest number of students is enrolled at that time. Enrollments in the summer term typically constitute about 40 percent of the fall semester, and spring semester enrollments typically constitute 90 to 94 percent of fall enrollments. There was an anomaly in the spring of 1983, at which time enrollments constituted about 98 percent of fall enrollments. The increase was attributed to the economic recession which Oklahoma was experiencing in early 1983. The spring 1984 enrollment has returned to normal range by equaling 91 percent of the fall 1983 enrollments.

Figure 4: A Comparison and Contrast of Private and Public College Enrollment in the United States and Oklahoma for Fall 1982

This figure depicts the distribution of reported enrollments in public and private institutions in the United States and Oklahoma. In that not all private institutions in the United States provide data to this federal report, these percentages are probably one or two percentage points lower than actual. In

Oklahoma, for example, if the preliminary enrollments for the two nonparticipating private institutions are added to the official figures, the 11 percent increases to almost 13 percent.

Analysis.—Given the variance inherent in the aggregate data used for the national report and the nonparticipation of some Oklahoma private schools, Oklahoma's public institutions carry 8 to 11 percentage points more of the overall student enrollment than occurs nationally; and Oklahoma's private institutions proportionately have one-half to six-tenths of the percent of student enrollments as do private schools nationwide.

Table 3: Head-Count Enrollment by Class Level

This table shows the total number of unduplicated individuals enrolled in 41 Oklahoma higher education institutions in 1983-84, distributed by class and by sex. The reader should note that the number of unduplicated individuals enrolled in that year was 242,105, a number 50 percent greater than the fall semester enrollment: in other words, higher education directly impacts about 50 percent more people than are enrolled in the semester of highest enrollment.

Analysis.—The total headcount in 1982-83 was 243,870. This means the headcount in 1983-84 shows a slight reduction over the previous year (0.7 percent). Females outnumbered males in 1983-84 by a ratio of 51 to 49. In 1962, twenty-one years ago, males outnumbered females in Oklahoma higher education by a ratio of 65 to 35. Eleven years ago, in the fall of 1972, males outnumbered females by a ratio of 60 to 40. Thus the bulk of the change in the enrollment of women has taken place during the past decade, a period which roughly coincides with the emergence of the urban two-year college as a part of the State System.

Table 4: Enrollment by Division

This table distributes enrollments for 1983-84 by division of study (lower, upper, graduate, and professional), and equates head-count enrollments using a

common work-load factor called full-time-equivalents. A full-time-equivalent undergraduate enrollment is calculated by dividing the figure 30 into the total number of student-credit-hours enrolled in by all students. The rationale for the figure 30 is based on the fact that a full-time undergraduate student typically takes four years to complete a 120-hour degree program, which means that he or she must take 30 hours per year to be a full-time student. Full-time graduate students are required to take 12 credit-hours per semester, or 24 semester-credit-hours per year.

Analysis.—In 1983-84, public institutions produced 114,161 full-time-equivalent work-load units, based on an unduplicated head-count enrollment of 216,019. Although the public institution head-count was down by 5,716 students from 1982-83 to 1983-84, the public institution FTE fell by only 26 students. By division of study, lower-division students produced 56.6 percent of the FTE enrollments in the State System, upper-division students produced 30.5 percent, graduate students produced 9.7 percent, and professional students the remaining 3.2 percent of the total during 1983-84.

The way to analyze relative work-load by division is to examine the ratio of head-count students to FTE enrollments produced. Students at the professional level were most productive in 1983-84: it required only 2,336 such students to produce 3,634 FTE units. What this means is that professional students typically go to school full-time, and enroll in above-average numbers of credit-hours each semester or term. On the other hand, it took 138,674 students at the lower-division level to produce 64,587 FTE's. Thus it required 2.1 students at that level to produce 1 FTE. At the upper-division level, 46,208 students produced 34,872 FTE's. It thus required only 1.3 upper-division students to produce 1 FTE. At the graduate level, 28,811 students produced 11,068 FTE's, a student-to-FTE ratio of 2.6 to 1.

Table 5: Student-Semester-Hours by Division

This table simply elaborates on the data presented in Table 4 by showing the number of student-credit-hours enrolled in by division. Of the 3,336,591 total student-credit-hours enrolled in by all students in the public institutions in 1983-84, 1,937,587, or 58.1 percent, were based on lower-division courses. By way of comparison, 31.4 percent of the total student-credit-hours were based on upper-division courses, 8.0 percent on graduate courses, and 2.6 percent on courses taken at the professional level.

DISTRIBUTION

PART III

DISTRIBUTION

Table 6: Enrollment by Race, Sex, Class Level, and Full Time/Part Time

This table contains a distribution of students in the public colleges by race, sex, class level, and full-time/part-time status. In the fall of 1983, full-time students comprised 56.0 percent of the total enrollment, and part-time students made up the remaining 44.0 percent. This full-time enrollment is very similar to enrollments last year. First-time-freshman students totaled 29,461 in that semester, a number equal to 80 percent of the graduates from Oklahoma high schools in the spring of 1983.

Table 7: Unduplicated Head-Count Student Enrollments by Public Institution for Fall 1983 by Race and Sex

Table 8: Unduplicated Head-Count Student Enrollment by Public Institution for Fall 1983 by Race

Table 9: Percentage of Student Enrollment for Fall 1983 by Race Within the Institution

Table 10: Percentage of Student Enrollment for Fall 1983 by Race Within the State System

Table 7 distributes the fall 1982 student enrollments by race and sex for each institution. Table 8 combines the data in Table 7 into race totals. Table 9 computes percentages based on data in Table 8 for student enrollment by race within the institution, and Table 10 computes percentages based on data in Table 8 for student enrollment by race within the State System.

Table 11: Public Enrollment by Program of Study and Class Level

This table breaks down the number of unduplicated head-count enrollments in the public colleges in 1983-84 by field of study and by class level. The table

shows that Business Management is currently the most popular field of study among students in the public sector. Some 30,744 students indicated that they were studying Business Administration in 1983-84; in addition, 14,565 students were studying Business Technology, making a grand total of 45,309 or 21 percent in business-related subjects. The second largest field of study was Education, with 26,281 students and 12.2 percent of the total enrollment, followed by Engineering and Engineering Technology combined, with 22,560 students, and 10.4 percent of the total enrollment.

Table 12: Private Enrollment by Program of Study and Class Level

This table presents the same information by field of study for private colleges as the previous table presented for public institutions. As in the public sector, the field of Business Management attracted the greatest number of private students, 4,658, or 17.9 percent of the private-sector enrollment. Engineering and Engineering Technology combined were second in popularity, followed by Technology and Education.

Table 13: Public and Private Enrollments by Program of Study and Class Level

This table combines the data in the two previous tables, and presents a distribution of head-count enrollments for the 1983-84 year by program of study and by class level. The top five fields of study in that year were Business Management, Education, Business Technology, Engineering Technology, and Engineering, all professional and vocational fields. Among them, these top five programs attracted 105,772, or 45 percent, of the 242,105 students enrolled in 41 public and private colleges of Oklahoma in 1983-84.

Tables 14, 15 and 16: Public Enrollment by County, State and Country

Tables 14, 15 and 16 show the geographic origins of students enrolled in Oklahoma higher education in 1983-84. Table 14 distributes those in the public

sector, Table 15 those in the private sector, and Table 16 those in the public and private sectors combined.

Analysis.—In the public sector, 90.6 percent of the students in 1983-84 were from Oklahoma, 5.4 percent were from other states, and 4.0 percent came from 123 foreign countries and territories. Texas furnished the greatest number of students from states other than Oklahoma with 1,874, followed in order by Kansas with 555, Missouri with 498, and Arkansas with 493. Foreign countries sending the most students were Nigeria, 894; Iran, 788; and Malaysia, 500.

Among the private sector institutions, Oklahoma students outnumbered nonresident students 57 to 43 in 1983-84. Students from Oklahoma comprised 57.5 percent, students from other states, 36.7 percent, and students from other countries 5.8 percent of the total.

Table 17: Public Institution Enrollment by Age, Sex, Race, and Class Level

This table distributes students enrolled in the State System by age, sex, and race. The median age of State System students remained slightly over 23 in fall 1983, with the modal group being in the 21-25 age range. In percentage terms, 59.9 percent of the student-body was 25 and under, and 40.1 percent was over 25. One-fourth of the total student body was more than 30 years of age in 1983-84.

Analysis.—Although women outnumbered men by a ratio of 51 to 49 in fall 1983, men outnumbered the women in every age category under 30 years of age. After 30 years of age, women outnumbered men in every category. Whereas 79.9 percent of the men were 30 years old or younger, only 69.9 percent of the women were 30 years of age or younger. Women tend, as a group, to wait longer to enroll in higher education.

TABLE 6

STUDENT PROGRESSION

PART IV

STUDENT PROGRESSION

Figure 5: Public Undergraduate Student Progression

This figure illustrates the progression of all undergraduate students classified by class level in the public institutions from the 1982-83 school year to the next fall enrollment. In this report summary, eight consequences are possible for each student. The following is a description of the figure moving in a clockwise direction. In the summer, fall, and spring enrollments for 1982-83 there were 133,356 undergraduate classified students enrolled in regular programs at all class levels within the public institutions of the State System. Of the base year students, 8.4 percent, or 11,141, completed their program by receiving either a certificate, associate degree, or bachelor's degree. Some 2.1 percent, or 2,748, of the base year students who did not return are considered to be stopouts who will return at a later date. This "stopout factor" is a historical average of the number of re-enrollments within an institution after a delay of one semester or more. Some 3.5 percent of the students, or 4,674, advanced more than one class level and 27,025, or 20.3 percent, advanced to the next class level. Remaining at the class level they were in during the base year were 19.0 percent, or 25,344 students. In all 44.9 percent, or 59,841 students, remained at the same institution. Students who left the base-year institution totaled 46.8 percent, or 62,374. Of those who left, 17,491 students transferred immediately to another public institution within the state. The percentage counted as students who delayed their transfer to another institution to some future point in time totaled 6.5 percent. Finally, 27.2 percent, or 36,230 students, did not return. They either transferred to private institutions in Oklahoma, to out-of-state schools, or simply dropped out of college altogether.

Three out of four students progressed satisfactorily within the public system and one out of four permanently left the system.

Figure 6: The Intra-Institutional Progression of Unclassified Undergraduate Students 1982-83 to Fall 1983

Unclassified students, often referred to as "special" students, numbered 34,565 in 1982-83. In fall 1983, 6,341 or 18.3 percent of the unclassified students returned to an institution within the State System. In other words, only one in five "special" students returned the next year. By definition these unclassified undergraduates are students enrolled for specific purposes other than seeking a degree.

Table 18: The Annual Undergraduate Progression Rates for the State System from 1982-83 to Fall 1983

This table displays the data in the SPR 9000 B5 report on progression for each class level. The rate of progression at all levels for the State System was 73 percent which corresponds to the data presented in Figure 5. The least progression occurs between the freshmen and sophomore years with a 38 percent attrition rate. The rate of attrition between the sophomore and junior years is less than half the freshmen rate, and the rates for the last two levels is half that of the sophomore to junior rate.

Figure 7: Projected Undergraduate Student Flow Based on a Cohort of First-Time-Entering Freshmen

This figure translates the progression data presented in Table 18 into a model of probable student flow through the system. In this model, 28 percent of a cohort of students is lost to attrition by the beginning of the sophomore year. By the beginning of the junior year, the attrition of the cohort has increased to 50 percent. By the beginning of the senior year, the cohort's attrition is 54 percent.

At the end of the senior year, the attrition rate is up to 59 percent for the student cohort. Stated another way, for every one hundred entering freshmen in the State System, 41 will eventually complete either a certificate, an associate, a bachelor's or a combination of degrees.

TRANSFER OF STUDENTS

PART V

TRANSFER OF STUDENTS

Figure 8: Transfer Pattern of Students

This matrix distills the data on Table 19 into the two-year and four-year institutions' exchange of students. The percentage reflects those students reported by receiving institutions as transferring into the schools during fall 1983 with or without a degree. Twice as many students transfer from two-year to four-year institutions (32%) as do from two-year to two-year institutions (16%). In fall 1982 more students transferred from four-year to two-year institutions (36%) than from two-year to four-year institutions (29%). For fall 1983 however these figures were mitigated somewhat with 31 percent transferring from four-year to two-year institutions and 32 percent transferring from two-year to four-year institutions.

Table 19: Detailed Transfer of Students

This matrix depicts one semester's record of students with or without degrees transferring into a public institution during fall 1983. The receiving institution defines the student as a transfer and designates the school from which the student transferred. The contributing institutions are arrayed in the left-hand column and the receiving institutions are listed at the top. For example, in fall 1983, Table 19 shows 136 students transferring from the University of Oklahoma to Central State University and 168 students transferring from Central State University to the University of Oklahoma. The matrix contains students at all class levels and for all classifications.
